Monica is in charge of Distributed Learning

Monica,

This is a mission critical project. The platform must be extremely-high available.

Forget about maintenance windows, and we want it active-active in both datacenters, Vlaanderen and Wallonie.

...and not expensive!

Monica is in charge of Distributed Learning

Monica,

This is a mission critical project. The platform must be extremely-**high available**.

Forget about **maintenance windows**, and we want it **active-active** in both datacenters, Vlaanderen and Wallonie.

...and not expensive!

Extreme High Availability

High Availability with Primary-Standby

Extreme High Availability with EDB PGD

EDB Postgres Distributed

EDB Postgres Distributed

- Bi-Directional Replication → Active-Active
- DDL Replication
- Automatic conflict resolution
- Extremely fast switchover and failover

EDB Postgres Distributed

- Bi-Directional Replication → Active-Active
- DDL Replication
- Automatic conflict resolution
- Extremely fast switchover and failover
- Nearly-zero downtime for maintenance
- Nearly-zero downtime for upgrades

EDB Postgres Distributed

- Bi-Directional Replication → Active-Active
- DDL Replication
- Automatic conflict resolution
- **Extremely fast switchover and failover**
- Nearly-zero downtime for maintenance
- **Nearly-zero downtime for upgrades**

A note on Logical Replication

Postgres Logical Replication

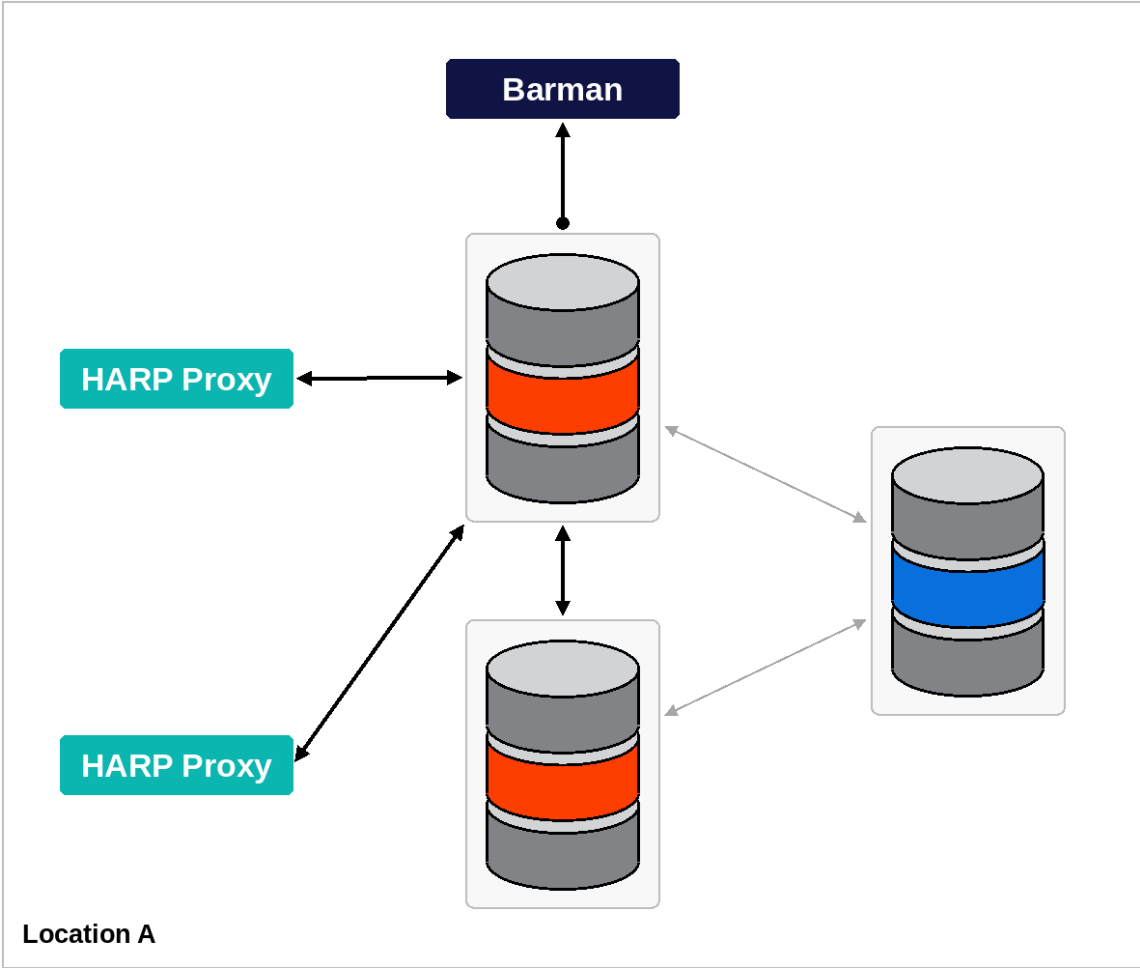

Each table requires a replica identity
Only one database gets replicated

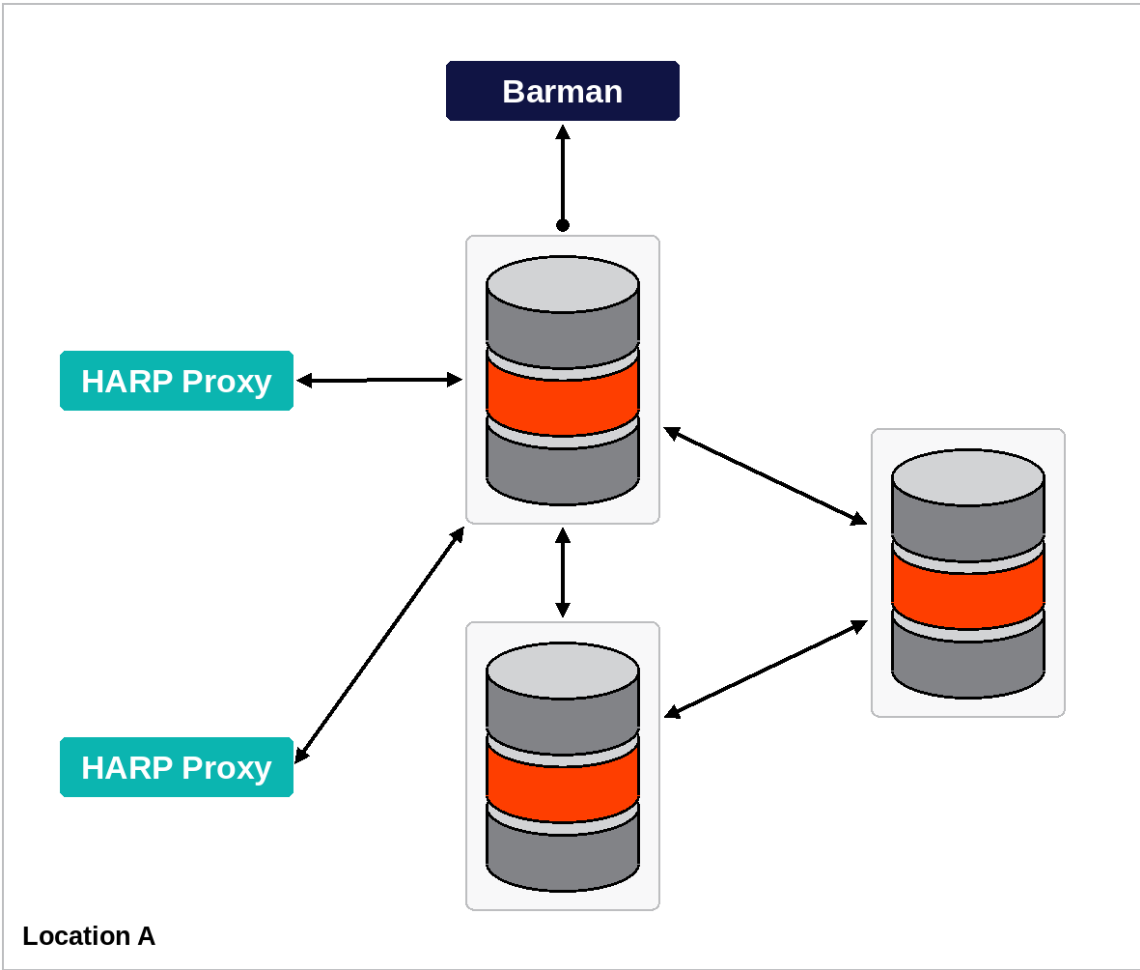

Very fast switchover
and failover

DEMO

We observed failover in 6 seconds
and switchover in less than 0.5 seconds

Multiple architectural layouts

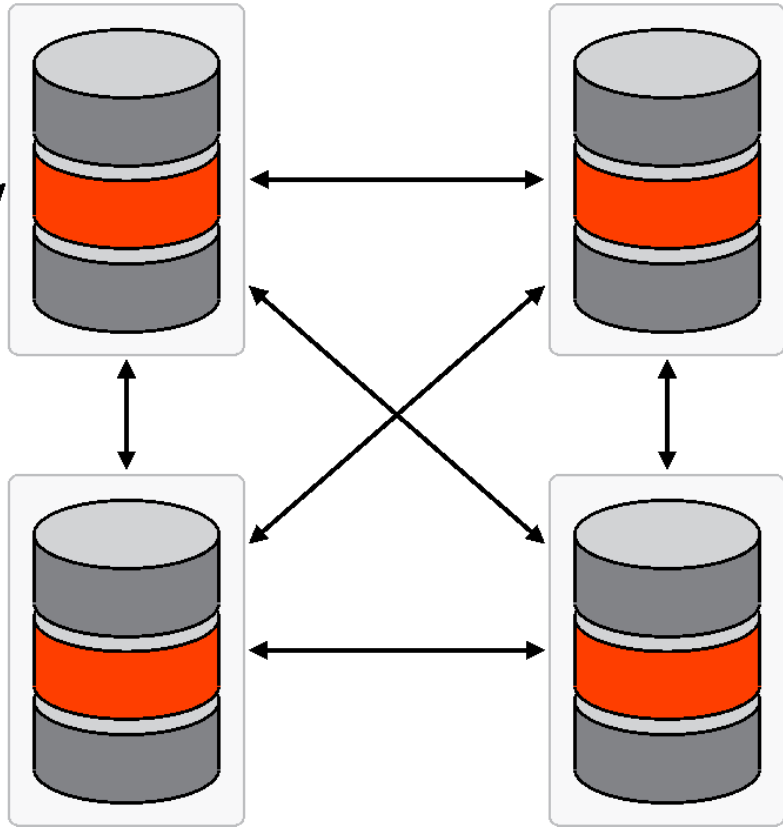

Rolling Upgrades

Closing Words

EDB Postgres Distributed

- Extreme High Availability
- Active-active (use carefully)
- Automatic conflict resolution
- Geo-Redundancy
- Nearly-zero downtime for maintenance
- Rolling upgrades

Dankjewel / Merci beaucoup
